AcclaimIP SEARCHER

IP Insights with AcclaimIP

AcclaimIP is a patent search and analytics software platform designed for those IP experts who need to perform detailed patent searches. With a core foundation of quality curated patent data, an intuitive user experience, and extraordinary performance, AcclaimIP includes a powerful collection of search and analytics tools giving you the ability to research patent data faster with confidence you found relevant results.

USER EXPERIENCE

The AcclaimIP user interface is intuitive, easy to learn, and supports all your work flows for patentability, prior art, and product clearance work. It's the only patent research platform that uses a windowing design paradigm similar to a MS Windows or OS X interface, but it runs inside of any modern browser. You'll find that the UI design better suits real world searching where each iterative search is a refinement of what you learned in the previous search. As you refine searches, you can adjust what you are searching for, explore concepts and technology areas, broaden and narrow the search, yet never have to start over as you navigate through the results.

AcclaimIP's powerful foundational search platform combines a series of tools to automate your searches, uncover latent patenting trends, assist in evaluating patents, and visualize your search results.

PERFORMANCE

Built on top of our FreePatentsOnline.com (FPO) performance architecture, Anaqua optimized AcclaimIP's simple and complex search capabilities through billions of search scenarios. Save time and avoid frustration through fast searches, instantaneous refinements, and real-time exports. AcclaimIP's performance enables powerful analysis tools, which would be too cumbersome to implement in a slower research platform.

DATA COVERAGE & QUALITY

Great results start with great data, and AcclaimIP lets you tap into the world's patent data in one place, accessing the most up-to-date and complete collection of global patents. AcclaimIP provides users with the most English-translated full text collections than any other patent search tool, including downloadable native language documents. In addition, AcclaimIP includes abstract data for 102 jurisdictions. Patent information maps to its supporting data, where available, including normalized names, legal events, maintenance events, family data, application status, and assignment data.

NEXT GENERATION CITATION SEARCHING

AcclaimIP's base citation counts and lists include citations to both the patent and its parent application. Through advanced treatment of citations, you quickly see lists of forward and reverse citations, and can navigate to relevant documents. Using AcclaimIP, you'll quickly realize that the most important citations are usually to the patent application, which provides earlier insight you wouldn't have using other tools' citation lists.

RE-INVENTED CLASS SEARCHING

AcclaimIP's class searching is fully aware of each class' position in the classification hierarchy. This means you can search the hierarchy at any point and add all child classes without having to look them up.

About Anaqua AcclaimIP

AcclaimIP™ is an exceptionally fast and powerful search and analysis tool ideally suited to enhance the entire IP process. With AcclaimIP, inventors, attorneys, researchers, and executives can leverage public patent information to track competitors, write stronger claims, and, make more informed filing, licensing, and renewal decisions to build superior patent strategies.

The AcclaimIP platform includes over 100 million global patent documents updated with roughly 90 thousand new documents weekly, including supporting data such as legal events, maintenance events, family data, application status, and assignment events.
