

AQX® Patent Management

DATA SHEET

In today's complex global environment, Intellectual Property drives business success for both corporations and law firms. Unifying collaboration, workflow, documents, data, and analytics in a single platform, Anaqua takes a holistic approach to the patent lifecycle to deliver differentiated IP management capabilities that help grow your organization, mitigate risk, and make your teams more productive. Automating preparation and prosecution is the critical first step.

Additionally, effectively managing documents, deadlines, and alerts creates a new degree of efficiency for your operation. Leveraging global curated external data to analyze your market and benchmark your portfolio enables smarter, more informed IP decisions.

Operational Excellence Throughout The Entire IP Lifecycle

AQX Patent Management delivers high-level process automation and integrated IP data analytics that provide insight into your operations, portfolio, market, competitors, and potential clients.

Automating prosecution tasks and integrating external data, to visualize and benchmark your IP portfolio, are the best practices of today's most innovative and competitive corporate and law firm leaders.

- Collaborate in Smart Workspaces™ tailored to users and their specific tasks
- Visualize your entire IP operation with ANAQUA HyperView™ - gain operational command to identify growth and development opportunities
- Seamlessly perform docketing automation for Office actions from USPTO Private PAIR
- Automate and structure tasks, assignments, due dates, and escalation responsibilities
- Manage patent annuities and foreign filing directly from the patent record
- Validate patent data at the record and portfolio level

IP Analytics for Intelligent Patent Management – Turning Insight Into Action

Anaqua is leading innovation in IP management with integrated analytics through AcclaimIP, which provides 40 full text patent collections and 102 worldwide bibliographic collections for research and analysis.

AQX's Business Intelligence tool, HyperView, integrates the public and private data into AQX for you to make better decisions. With patent management evolving beyond traditional preparation and prosecution, portfolio insight and global IP data are driving corporate and legal visionaries in securing a competitive edge today.

- Leverage integrated AcclaimIP dashboards and reports for in-depth market research and competitive analyses
- Monitor Forward Examiner Rejections for insight into patent quality and identify licensing, litigation, and divestiture opportunities
- Perform FTO, patentability, and landscape searches and identify whitespace for growth
- Apply predictive analytics based on USPTO PAIR data including examiner statistics and broader competitive analysis
- Import and analyze individual patents and portfolios against global IP data
- Integrate Snapshot Analytics in Smart Workspaces for IP insights you can act on
